

## Radiolink vT24 Pairing Instructions

Occasionally the loadcell and the handheld display will lose its pre-programmed connection referred to in this guide as 'pairing'. When this happens the display on the handheld will look like this:

To re-establish the pairing follow this guide:

- 1) Switch off the handheld display by pressing  for three seconds.
- 2) Remove the batteries from the loadcell only
- 3) Switch on the handheld keeping your finger on the  button, as soon as the display switches on simultaneously press and hold the  button until the display shows:

Pairing

- 4) As soon as 'Pairing' displays refit the loadcell batteries, pairing will automatically occur and you should see a load displayed. Please note the 'pairing' mode is only held for 10 seconds, if you do not refit the batteries within this period then you will need to start again at step one.
